Abstract (en)

[origin: EP1484660A2] A pedal's transmission behavior is independent of its lengthwise displacement. An intermediate lever (10) swivels on a fixed swivel point (SP) (11) and links to an element to be activated (2) on one side of the SP. Deflection pulleys displaced without operating the pedal move to a fixed linkage point a flexible traction device (12) linked to the SP's other side as a simple pulley block.
