Abstract (en)

[origin: WO03078216A1] The invention relates to a communication device in a communication path between control elements (18, 20, 22, 24), which are actuated by a driver of a vehicle and emit control signals and devices (4, 8) of the vehicle, which receive control signals and convert said signals into responses in or by said devices. According to the invention, the transmission of the control signals from the control elements (18, 20, 22, 24) and to the devices (4, 8) takes place, at least in sections of the communication path, in a wireless manner.
