Abstract (en)
[origin: WO03076747A1] The invention relates to a supporting and guiding device for holding movable, hanging door or wall elements that are mounted in runner rails (1) which are shaped as hollow boxes and are provided with a continuous recess on the bottom thereof. Said runner rails (1) are fixed to the ceiling of a building via a hanging construction (14, 21). In order to exclude impairments as far as possible in connection with mounting such a supporting and guiding device, an intermediate profile (2) is arranged between the runner rail (1) and the hanging construction (14, 21).
