Abstract (en)

The assembly has an open-end box (1) housed and wedged in position in an external package (2). Tenons (5a, 7a) project towards outside from two parallel walls of the box and stop against internal walls or partitions of the package to separate the box from the package by a shock absorbing space. Two internal partitions are parallel to the former parallel walls and spaced apart from them by another shock absorbing space. An independent claim is also included for a blank in a semi-rigid material such as cardboard or corrugated cardboard, pre-cut and repressed for designing an open-ed box.
