Abstract (en)

[origin: EP1486592A1] A hotmelt polymer textile spinning assembly (1) discharges thread to a texturizing station (16), with a number of sub-treatment stations (9, 12, 14, 15, 18) and a bobbin winder (21) held within a frame (6) under the spinning station. The position of the texturizing station (16) is adjustable in the frame (6) with respect to the spinning assembly (1). The fibre feed to the treatment station is supported by a lift/lower unit (10), which rises and falls in vertical rails (13) as required within the surrounding frame (6). The texturizing station has a thread treatment station (9) and a thread draw roller or galette (12), both located within the lift/lower unit (10).
