Abstract (en)
[origin: EP1486749A2] In a process to heat and homogenise the temperature of a single- or two-phase fluid, the fluid passes through a tube containing a bank of vortex generators. The bank of vortex generators is a comb-like sheet metal array inclined (10-80) to the oncoming fluid flow. Also claimed is a commensurate automotive radiator or heat exchanger, and a commensurate heat exchanger or flash heat exchanger.
