Abstract (en)

[origin: WO03079838A1] The invention relates to a training shoe, in particular a ski-shoe, which can be connected to sports apparatus that is displaced along the ground. Said shoe is characterised in that the centre of the ball axis lies between the longitudinal axis of the sports apparatus and the inside edge of the ski and the axis of symmetry (S1) of the upper (1) is offset by an angle (α) in relation to the axis of symmetry (S2) of the sole surface (2), in such a way that the centre of the heel lies between the axis of symmetry (SX) of the ski (3) and the inside edge (Ki) of the ski (3).
