Abstract (en)  
[origin: WO03080718A1] The invention relates to a plastic film with an interference multilayer system applied thereon that comprises at least two layers having different refractive indexes. Said layers can be obtained by crosslinking a coating composition containing nanoscale inorganic solid particles having polymerizable and/or polycondensable organic surface groups, thereby forming a layer that is crosslinked by means of the polymerizable and/or polycondensable organic surface groups. The films can be used as optical laminating film.
