Abstract (en)

[origin: WO03080864A1] The invention concerns the field of biology, genetics and medicine. In particular, it concerns novel methods for detecting, characterizing and/or treating neurodegenerative pathologies, in particular amyotrophic lateral sclerosis. The invention also concerns methods for identifying or screening compounds active in said pathologies. The invention further concerns compounds, genes, cells, plasmids or compositions useful for implementing said methods. In particular, the invention concerns the role of histones deacetylases, and particularly histone deacetylase 2, in said pathologies and its use as therapeutic, diagnostic or experimental target.
