Abstract (en)

[origin: WO03079307A1] The invention relates to a monitoring system comprising at least one sensor (11) for monitoring a parameter that identifies the condition and/or situation of a person and a data transfer device (20) for transferring data to an emergency call control centre. The aim of the invention is to provide a monitoring system for reliably protecting automatically, in particular, a small child, without requiring the child to activate the sensor (11). According to the invention, in the known monitoring system, the sensor (11) and the data transfer device (20) are connected to a respective data transmission device (13, 23) for exchanging data between the sensor (11) and the data transmission device (20).
