Abstract (en)

[origin: WO03075693A1] The invention relates to a method and system for detecting the operational status of a garment. The invention especially relates to the garment (400), which is provided with a user interface for detecting the use of the garment (400) so that the garment (400) is provided with at least one element (402-418, 424) supplying an output, the value of the output being determined according to the operational status of the garment (400).
