Abstract (en)
[origin: EP1350447A1] The seat module, e.g. for an office chair, consists of a support (10) with a pommel (20), and a frame (12) that is located above the base and equipped with a cantle (26). The support and frame are connected by an articulated joint (14) that allows the frame to tilt relative to the support about an axis perpendicular to its plane of symmetry. The frame is joined to the pommel by an elastic membrane that can be covered by a cushion with a lengthwise groove to accommodate the seated person's coccyx.
