Abstract (en)
[origin: WO02081332A1] The invention concerns a metal crimping cap (10) for a fluid product dispensing device, said cap (10) serving to fix a dispensing member (20), such as a pump or a valve, on the neck (31) of a reservoir (30) containing the fluid product to be dispensed, said cap (10) comprising a fixing part (11) for fixedly receiving said dispensing member (20), and a crimping part (12) which is urged to be crimped on the neck (31) of the reservoir (30), said crimping part (12) including a plastic cover element (15) extending at least partly over the inner surface and at least partly over the outer surface of said crimping part (12), such that there is no metal particle generation before, during and/or after crimping. The invention is characterised in that said cover element (15) comprises on the outer surface of said crimping part (12) of the cap (10), retaining means (18) adapted to co-operate with a push-button to retain the latter preventing it from being removed from said dispensing member (20).
