Abstract (en)

[origin: WO03082726A1] The invention relates to a hydraulic control device for a winch, comprising an actuating device (260) for fixing the operational mode of the winch, and a positioning device (253, 263) which can be placed in a position during the control of the winch, in which an interlocking stop (254) for blocking the mooring is ineffective. The positioning device is arranged in such a manner that either the interlocking stop (254) can become ineffective by a movement of the actuating device in the longitudinal direction thereof or the interlocking stop can become ineffective by means of a rotational movement of the positioning device. As a result, the mooring blocking can be avoided with little effort.
