Abstract (en)
[origin: WO03080587A1] There are provided stable labelled taxanes, characterized in that the isotopes are present in the benzoyloxy group at the C-2 position. More particularly, one or more of the hydrogen or carbon atoms of the benzoyl residue at the C-2 position of the taxane skeleton is replaced respectively from deuterium or ¹³C. A process for their preparation and their use as internal standard in analytical methods for determining taxanes, useful anticancer drugs, are also provided.
