Abstract (en)

[origin: WO03080642A1] The invention relates to novel 19-nor-17 alpha -pregna-1,3,5(10)-trien-17 beta -ols with a 21,16a lactone ring having a long-chain substituent in the 11 beta position of general formula (II), wherein R<11> represents a long-chain alkyl radical, which comprises a nitrogen atom and which can be substituted on the end by a perfluoroalkyl group. These compounds act, in a tissue-selective manner, as pure antiestrogens and, due to these properties, are suited for producing medicaments.
