Abstract (en)
[origin: WO03083203A1] The invention relates to an awning web consisting of at least two partial webs (8, 9). The two partial webs abut one another at the abutting joint (11). To keep the abutting joint together, the web is provided with a connecting strip (14), which bridges said joint and forms a material connection with each of the two partial webs by means of a corresponding strip width. To prevent the transmission of light between the abutting joint (12, 13), where the abutting edges form a gap, the web is provided with a strip (18), which is less transparent than the rest of the connecting strip.
