Abstract (en)

[origin: WO03083400A1] The invention relates to a system for processing information delivered separately by man/machine interfaces, communication equipment and/or sensors which are located on a field of intervention. The inventive system comprises a computer (1) which is built into a single case and which can receive, process and send data supplied by peripherals (9, 10, 11) and sensors (5-8) in order to enable the information to be shared among those working on the field of intervention and to facilitate co-operation and decision making. The aforementioned man/machine interfaces comprise keyboards, screens, touch screens, consoles or any other type of man/machine dialogue interface. The invention is suitable for command purposes on a battlefield.
