Abstract (en)

[origin: WO03082469A2] The invention relates to a device for carrying out and continuously monitoring chemical and/or biological reactions in situ. Said device comprises a reaction vessel and a monitoring unit that is fixed in the latter, said unit permitting the continuous selective molecular identification of a single reaction partner. The invention also relates to a method for the selective continuous in situ identification of reaction partners in chemical and/or biological reactions, in addition to a computer program for carrying out the inventive method.
