Abstract (en)

[origin: WO03073417A2] An intelligent social agent is an animated computer interface agent with social intelligence that has been developed for a given application or type of applications and a particular user population (Figure 4b). The social intelligence of the agent comes from the ability of the agent to be appealing, affective, adaptive, and an appropriate when interacting with the user. An intelligent personal assistant is an implementation of an intelligent social agent that assists a user in operating a computing device and using application programs on a computing device.
