Abstract (en)

The platform according to this invention is mounted on an end of a lifting and/or transporting apparatus, an extensible structure being placed between the platform and the apparatus. The extensible structure permits to really improve the movement of the basket. As a result of this, the operator can work in a better way by utilizing the said platform. <??>In general, the aerial platform (1) includes a crate or basket (2) to lift and/or transport persons or things. The basket (2) is slideably and rotateably mounted on a bar (3). In turn, the bar (3) is slideably and rotateably (360 DEG) mounted on an end of an arm (4). The arm (4) could be a telescopic arm or other type of arm and is included in the apparatus of the platform. <IMAGE>

The platform (1) an extensible bar (3) placed between the platform and a lifting and/or transporting apparatus. A crate or basket (2) lifts and/or transports a person or a thing. The basket is mounted on the bar that is slideably and rotateably mounted on an end of an arm (4). The bar is mounted on a support (5) having a motorized pivot (6) applied on an end of the arm to rotate the basket angularly.
