Abstract (en)

[origin: WO03084490A1] A method for achieving a reproducible hair shape is disclosed in which a composition is applied to the hair which comprises at least one active agent which, alone or in combination with other materials, can give hair a form memory effect after application to the hair and after carrying out the method according to the invention. The hair is given a particular (permanent) form and said permanent form is fixed by inducing a chemical or physical transition in the applied agents, whereby after a desired or undesired deformation of the memory form, the original memory form may be regenerated by means of a physical stimulation. Furthermore a method is disclosed for the reproduction of a previously programmed permanent hair style which has been transiently transformed into a temporary form or otherwise misshapen.
