Abstract (en)

[origin: WO03084814A1] This invention relates to a method and an apparatus (2) for wrapping a roll of material (1), in particular a roll of paper, and a wrapping (40) made therewith. In the method, the side surface (41) and the ends of the roll (1) are first covered with a base wrapper web (42) according to the prior art, head discs (45, 48), roll end wrapper webs (46, 49) wound at the ends of the side surface (41) of the roll. An outer wrapper web (52), made of deformable film, is wrapped onto the base wrapper web (42) and roll end wrapper webs (46, 49) in such a way that an axial overhang (53, 54) is created at both ends (43, 44) of the roll (1), which overhang folds over onto the roll end surface (43, 44), over the said head disc (45, 48).
