Abstract (en)

[origin: WO03085183A1] A device for controlling the feed of an elastomeric yarn (11), of known elastic characteristics, withdrawn from a bobbin (B) and fed to a textile machine (10) such as a knitting machine, a stocking machine, a bobbin winder or other textile machine, said yarn possessing an intrinsic elasticity and being fed to said machine with an intrinsic speed, there being provided means (18) for sensing the tension of the yarn (11) and means (3, 12) for measuring and modifying this speed, both associated with a single body (2) of the device (1) and both connected to means (20) for controlling and regulating said tension and speed parameters; means for compensating the variation in the elongation of the yarn being provided to maintain the diameter and the quantity of the yarn fed to the textile machine constant. The method implemented by this device is also claimed.
