Abstract (en)

[origin: WO03085507A2] The invention relates to an input device, a system and a method especially for controlling an object that can be displayed on a display. According to the invention, a center section and associated actuating members have a substantially similar cross-section or diameter and are disposed one behind the other and/or the actuating members can be additionally elastically deformed, thereby allowing for an easy handling of the device and system even in complicated control situations.
