Abstract (en)

[origin: WO03083667A1] A system is disclosed in which a data processing device (130) is completely synchronized with a messaging service. (120) One embodiment of the system comprises a wireless data processing device; a messaging service to maintain messages (102) and other information (102) on behalf of a user; and synchronization logic for maintaining synchronization of the messages and other information between the wireless device and the messaging service.
