Abstract (en)

[origin: WO03085605A1] The invention relates to a tachograph (1) comprising a cubic housing and a printing device provided with a displaceably mounted carrier (28) for receiving a rolled strip (29) forming the printing material supply. According to the invention, the latch which is active in the closing position of the carrier (28) is disengaged by actuating a key (38) and the carrier (28) is displaced in the direction of the insertion position, as a result of force deflection at fixed abutments, by means of unlatching elements (50,51) which are interconnected by a shaft.
