Abstract (en)

[origin: EP1493352A1] The kit has a hygrometry sensor (4) that is incorporated with a package of cosmetic product. The indicator is arranged for delivering information which integrates humidity value in a given duration. An ambient hygrometry sensor is fixed on a container body. A human body treating device receives a weather forecast and information concerning the humidity of air in building. An independent claim is also included for a method of cosmetic treating of a person.
