Abstract (en)

[origin: DE10030958A1] The invention relates to a method for vacuum cleaning using a hand vacuum cleaner (1). The dust is first collected in a dust collection container (9), for example a dust filter bag (3), and then disposed of. An adsorbent (7), for example activated carbon, is also provided for adsorbing odours. The invention also relates to a dust filter bag (3) or dust collection compartment (9) for a vacuum cleaner (1). The aim of the invention is to improve a method and a dust filter bag (3) or a dust collection compartment (9) of this type in terms of advantageously preventing or reducing the initial odour surge. To this end, the adsorbent (7) is introduced directly into the dust collection compartment (3, 9) and an adsorbent (7) is provided in the dust filter bag (3) or the dust collection compartment (9) in a loose form.

[origin: DE10030958A1] A hand vacuum cleaner (1) comprises a dust collection chamber (9), e.g. a dust filter (3), which can be disposed of. Smell is also adsorbed using an adsorber (7), e.g. active charcoal. The adsorber is placed in the dust collection chamber.
