Abstract (en)

Method for manufacturing packages from a flat, shaped element of packing stuff, particularly having at least a cardboard or pasteboard material layer, which package is manufactured by folding partial areas (L1, L2, L3, L4, L5, A1,A2) of predetermined shape and size, along predetermined folding lines and coinciding with the corners of the finished package, characterized in that it has folding means in contact with the surfaces of the partial areas (L1, L2, L3, L4, L5, A1, A2) of predetermined shape and size intended to form the external faces of the package and executing only rolling movements along said surfaces or in that said folders are brought to adhere in a removable and fixed way as regards the position relative to said areas (L1, L2, L3, L4, L5, A2) of the flat, shaped element (2) to be fold. Object of the invention is also a device for carrying out the above method.
