Abstract (en)

[origin: EP1493701A1] The sheet delivery device of especially a printing press has a sheet guiding unit (7.1) which has a revolving suction belt (8) with at least one opening, and which acts on the undersides of the sheets. The sheet guiding unit is movable from a first operating position (9), in which it guides the sheets for feeding from the sheet conveying system to the delivery stack (5), into a second operating position (10) in which it feeds sheets from the sheet conveying system to a sheet receiving unit (11).
