Abstract (en)

A connecting element (16) for an engaging assembly (10) for floor coverings is disclosed. The connecting element (16) comprises first and second connecting members (18, 20) for connecting together respective first and second engaging members (12, 14) for engaging a floor covering. The first connecting member (18) extends from the second connecting member (20). The first connecting member (18) comprises a pivot member (24) about which the first floor engaging member (12) can pivot. Preferably, the second connecting member is co-operable with the second floor engaging member to allow linear vertical adjustment of the position of the connecting element (16) relative to the second floor engaging member (14).
