Abstract (en)
[origin: EP1493927A1] The interface (10) has a selector (12) that moves between two positions of selection. Terminals (16) are connected between themselves, according to the position of the selector when there is no card in a card slot (14) or when the card is present in the slot. The selector is moved between three reference positions by output terminals (P1, P2, P3), and a terminal (15) is connected with an electrical network. Independent claims are also included for the following: (a) an apparatus including a control interface (b) a control system comprising a control interface.
