Abstract (en)

[origin: EP1494193A2] Method for determining a whole journey route from at least two partial route sections using a vehicle navigation device that assembles a route from nodes and links and has the following steps: calculation of a first intermediate route to an indirect intermediate target, determining of a node of the first route according to defined distance criteria, calculation of a second part route and combination of the two route sections to form the whole route. An independent claim is included for a vehicle navigation system.
