Abstract (en)

[origin: FR2838760A1] The assembly to maintain the tension of a fabric (3) on a support (5a,5b), and give free access to the rear surface, has at least one mechanical closure (6) as a sliding clasp fastener along at least one of the dimensions, to expose the support surface at a column (1) with panels (8). The assembly to maintain the tension of a fabric (3) on a support (5a,5b), and give free access to the rear surface, has at least one mechanical closure (6) as a sliding clasp fastener along at least one of the dimensions, to expose the support surface at a column (1) with panels (8). The fabric is a stretch material which, before mounting, has smaller dimensions than the support structure. The covering fabric can be transparent to give a view of images on the support surfaces, and allow for illumination if required.
