Abstract (en)
[origin: WO03083050A2] Human and murine analogs of DUBs, hematopoietic-specific, cytokine-inducible deubiquitinating proteases, clustered on chromosome 7 and their respective regulatory regions are identified. The nucleotide or proteins encoded thereby may be used in assays to identify inhibitors of hDUB7 or mDUB7. The invention also includes transducing peptides comprising an NLS or transducing sequence of hDUB7 or mDUB7 linked to a cargo molecule, and methods of delivering a biologically active protein, therapeutically effective compound, antisense nucleotide, or test compound to a cell wherein a transducing peptide is added exogenously to a cell.
