Abstract (en)  
[origin: WO03087507A1] Disclosed is a door comprising a leaf (10) which is closable between an open position and an closed position, a guide rail arrangement directing the movement of the door leaf, a fastening arrangement fixing a rail element (20) of the guide rail arrangement to a wall by means of a plurality of fastening elements (30), each of which can be fixed to the wall as well as to the rail element (20), said wall having an opening which can be closed with the aid of the door leaf, and a pulling means which can be fixed to the door leaf (10) as well as to a drive unit and/or a weight-balancing device. The inventive door is characterized by the fact that at least one protective element (40) is assigned to the guide rail arrangement. Said protective element (40) can be fixed to the rail element (20) and/or at least one of the fastening elements (30) and is used for bridging an intermediate space between the rail element and the wall.
