Abstract (en)

[origin: WO03087963A2] The invention relates to a measuring device for process engineering, for using in measuring and/or cleaning and/or calibrating installations in the field of process automation, for the measurement of pH values and/or redox potentials and/or other process quantities. Said measuring device comprises a central unit (1) to which at least one measuring module (2) can be connected. Each measuring module (2) can be selected by the central unit (1) by means of a selection line (3) which is associated with the module.
