Abstract (en)  
The present invention is related to a respirator mask which comprises a mask shell, a resilience strap and a buckle, wherein the mask shell having two through holes located at its two sides for the resilience s trap to p ass through is fitted over a nose and mouth portion of the face of the user, and is fasten against the face of the user by using the buckle installed around the resilience strap whose two ends pass through the through holes. Thus, the present invention can have effects of quick adjustment and fastening, as well as enhancing the edge fitness of mask simply by pulling two ends of the resilience strap to adjust the tightness. <IMAGE>
