Abstract (en)
An elevator landing door apparatus is provided, in which a fire prevention member opposing a vertical frame in a door-closed state is partially disposed and secured in an upper portion of a door-opening side end portion of a landing door. A hole is provided in one of the vertical frame and the fire prevention member. An insert portion inserted into the hole in the door-closed state and restricting deformation of the landing door toward a hoistway side is provided in the other of the vertical frame and the fire prevention member. <IMAGE>
