Abstract (en)

[origin: EP1496147A1] The attachment arrangement is a one-piece part (1) with first and second segments (2,3) at an angle. The first segment attaches the part to the housing and the second segment couples and adapts the damper (14) end and has a protruding region to which the end part of the damper is directly coupled. The protruding region is an independent part of injected rubber (5) or similar material that covers at least the second segment of the one-piece part.
