Abstract (en)

A refrigeration appliance (refrigerator, freezer and the like), comprising an evaporator (5), a compressor (8) and electrical defrost means (6) for said evaporator (5), in which a microprocessor (13) is present, associated with time measurement means (15, 18) providing the microprocessor (13) with data relative to the functioning of the compressor (8) for the purpose of obtaining from said data a percentage operation of the compressor (8) and an indication of the predicted commencement of defrost (Hdl), this indication being compared with one or more time bands with the purpose of advancing or delaying if necessary the effective commencement of the next defrost so that it takes place within the established time band. <IMAGE>
