Abstract (en)
Security system with fingerprint recognition (100) comprising a local apparatus (50) provided with: a fingerprint acquisition unit (1) for generating, based on the finger of the main user placed near the unit, an electrical signal representative of the corresponding fingerprint, processing means (CPU, INT) coupled to the acquisition unit (1) for supplying reference digital data on the basis of said electrical signal. Furthermore, the local apparatus comprises a memory (M) controlled by the processing means (CPU) for storing the reference digital data. <??>The system (100) is characterized in that it further comprises a remote managing apparatus (3) such as to generate an authorization signal by which said processing means (CPU, INT) can enable storage of the reference digital data in the memory (M). <IMAGE>
