Abstract (en)
An image display device (1) is provided that can be reduced in size and weight by using an EL and can display a clear image whose color does not change by any of reflected light or transmitted light. The image display device (1) includes an opaque first image layer (11) on a surface of which a first image is formed, the first image layer being made of a sheet-like material and being provided with a plurality of holes, a second image layer (12) that is placed on a back surface of the first image layer (11) and is made of a transparent sheet on which a second image (122) is formed, the second image being visible through the plural holes, and a lighting system (13) for illuminating the second image (122) from a back, the lighting system (13) being placed on a back surface of the second image layer. <IMAGE>
