Abstract (en)  
[origin: WO03088777A2] The invention relates to a shoe of the type that comprises an upper and an outer bottom. The invention is characterised in that the heel area of the outer bottom comprises an upper sheet (20), a lower sheet (30) and at least one elastic element (50, 60) which is disposed between the two sheets on each lateral and medial side of said bottom. Moreover, each elastic element (50, 60) can be biased under an essentially-vertical force. Preferably, an intermediary sheet (40) extends transversely between the lateral edge of a respectively upper (20), lower (30) sheet and the medial edge of the other respectively lower (30), upper (20) sheet. Said intermediary sheet forms an elastic pin (50, 60) with each of the upper (20), lower (30) sheets respectively.
