Abstract (en)

[origin: WO03090948A2] The invention relates to a medium-supply coupling comprising coupling elements for coupling and/or uncoupling the medium-supply lines that are located on a rolling frame (20) to and from medium-supply connections of chocks (21) that are driven in rolling frames, in particular for working or back-up rolls. To automate the coupling and uncoupling process, the coupling elements of the medium-supply and drainage lines on the rolling frame (20) are configured so that they can be automatically coupled to and uncoupled from the medium-supply connections of the chocks (21).
