Abstract (en)

[origin: WO03084752A1] The invention relates to a device for positioning further processing machines, such as folding machines, cross-cutting devices, sheet pilers or roll winding systems, on printing machines. Said system comprises at least one mobile further processing device (7) on which a first positioning device (13) is arranged and which co-operates with an additional positioning device (14) which is fixed to the base (8) in such a manner that the further processing device (7) can be positioned in a reproducible manner with respect to the printing machine.
