Abstract (en)
[origin: WO03089310A2] The device (100) consists of a stopper (121) which can close the neck (101) of a receptacle and an inner capsule (122) which can be glued to or sealed on the edge (113) of the neck. It also comprises: a sealing disk (121), making up the stopper or kinematically connected thereto, on which the inner capsule is fixed (122), protruding radially outside the neck (1) and a ring (124) provided with an inner thread(341) which is able to cooperate with the outer thread (111) of the neck (101), said ring (324) being fitted with a stop (344) which extends from one edge (345) according to an axial direction (X-X') and which can exert a pushing effort (F3) on the disk (121) in the direction in which the disk is spaced (121) in relation to the neck (101).
