Abstract (en)
[origin: WO03091151A1] The invention relates to a corkscrew comprising a spiral (10) that is rotationally mounted inside a sleeve (28), which can be placed on the neck of a bottle, or is rotationally mounted between at least two corresponding limbs that can be placed against the neck of the bottle. The corkscrew also comprises a driving shaft (15) whose rotation actuates the spiral (10) connected thereto. In order to be able to actuate the corkscrew with a distinctly reduced expenditure of force, a reduction gear (12, 13, 14) is mounted between the driving shaft (15) and the spiral (10).
