Abstract (en)

[origin: WO03091670A1] The invention relates to the use of tracers for determining running time or residence time in a high temperature zone. The aim of the invention is to use a tracer as an alternative to radionuclides in high-temperature zones exceeding temperatures of 1000 DEG C. To this end, the tracers are substances that thermally dissociate in the high-temperature zone and whose dissociation products can be selectively detected.
